Introduction

Safety Roof Anchors is an Australian company established and operated by rope access technicians and certified riggers with many years of hands on experience.

After many years spent working at heights, we decided it was time to put our practical knowledge to use and create better, safer products that are robust yet easy to install.

Our range of rope access and fall arrest anchor points and static lines has been fully engineered and independently tested by NATA accredited engineers guaranteeing compliance with AS/NZS 5532:2013.

All parts are genuine SRA products, designed and manufactured specifically for use in industrial rope access and fall arrest applications.

Our unique way of fixing into light structures such as metal roofs and timber trusses, provides unrivalled strength due to the maximized use of the host structure working in unison with the anchor point.

As a result, we have bridged the gap between rope access and fall arrest anchor points, which means that all of our products can be used in both applications.

Our approach is different because we know that only the best will do when you are working at height. We are driven by innovation and quality to provide you with the products you can trust when it matters the most.
